

Web Application Development using WORDPRESS

By
Ashok Kumar.S
Assistant Professor/CSE
Manakula Vinayagar Institute of Technology

Most Popular Site Building Platforms in 2018

In recent statistics made by [W3Techs](#), **WordPress is the most popular** content management system (55%) followed by Joomla (20%) and Drupal (11%).

Software's Needed to Build Website

- ▶ XAMPP and WordPress

X- Cross Platform (Windows, Linux and Mac)

A- Apache

M- MySql

P- PHP

P- Perl

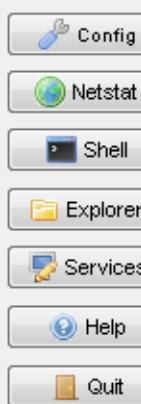

To Download XAMPP:

- ▶ <https://www.apachefriends.org/index.html>
- ▶ Install Xampp
- ▶ Start Apache and Mysql in Xampp control panel

Modules

XAMPP Control Panel v3.2.2

Service	Module	PID(s)	Port(s)	Actions			
<input type="checkbox"/>	Apache	5024 5080	80, 443	Stop	Admin	Config	Logs
<input type="checkbox"/>	MySQL	5104	3306	Stop	Admin	Config	Logs
<input type="checkbox"/>	FileZilla			Start	Admin	Config	Logs
<input type="checkbox"/>	Mercury			Start	Admin	Config	Logs
<input type="checkbox"/>	Tomcat			Start	Admin	Config	Logs

```

How to work on WordPress

To Download WordPress:

- ▶ <https://wordpress.org/download/>

To Install WordPress:

- ▶ Inside Xampp in C drive → htdocs → Paste downloaded word press file (Rename if you want).

Type the below url in browser

- ▶ <http://localhost/wordpress>

Welcome to WordPress. Before getting started, we need some information on the database. You will need to know the following items before proceeding.

1. Database name
2. Database username
3. Database password
4. Database host
5. Table prefix (if you want to run more than one WordPress in a single database)

We're going to use this information to create a wp-config.php file. **If for any reason this automatic file creation doesn't work, don't worry. All this does is fill in the database information to a configuration file. You may also simply open wp-config-sample.php in a text editor, fill in your information, and save it as wp-config.php.** Need more help? [We got it.](#)

In all likelihood, these items were supplied to you by your Web Host. If you don't have this information, then you will need to contact them before you can continue. If you're all ready...

Let's go!

Below you should enter your database connection details. If you're not sure about these, contact your host.

Database Name

The name of the database you want to use with WordPress.

Username

Your database username.

Password

Your database password.

Database Host

You should be able to get this info from your web host, if localhost doesn't work.

Table Prefix

If you want to run multiple WordPress installations in a single database, change this.

All right, sparky! You've made it through this part of the installation. WordPress can now communicate with your database. If you are ready, time now to...

[Run the install](#)

Welcome

Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

Site Title

Visual

b i link b-quote del ins img ul ol li code more close tags

This special lecture is aimed to impart basic knowledge in the creation of our own website.

As a Computer Science and Engineer it is mandatory and will be good if we have our own website through which we can share the files with our colleagues friends. Wordpress is a simple tool which has in-build files which link our website to the database which we create.

It is a tool which is also used in most of the small scale companies.

ABOUT LECTURE LECTURE NOTES ▾ LIST OF MINI PROJECTS ▾

Microp processor notes > Microp processor theory and lab notes

About Lecture

This special lecture is aimed to impart basic steps concepts in creating a website using wordpress.

As a Computer Science and Engineer, it will be good to have our own website so that we can share documents to our colleagues or friends.

Wordpress is a tool which is also currently used in most of the companies.

Contact Forms Add New

Screen Options ▾ Help ▾

 Getting spammed? You have protection.

Spammers target everything; your contact forms aren't an exception. Before you get spammed, protect your contact forms with the powerful anti-spam features Contact Form 7 provides.

Contact Form 7 supports spam-filtering with [Akismet](#). Intelligent [reCAPTCHA](#) blocks annoying spambots. Plus, using [comment blacklist](#), you can block messages containing specified keywords or those sent from specified IP addresses.

 Before you cry over spilt mail...

Contact Form 7 doesn't store submitted messages anywhere. Therefore, you may lose important messages forever if your mail server has issues or you make a mistake in mail configuration.

Install a message storage plugin before this happens to you. [Flamingo](#) saves all messages through contact forms into the database. Flamingo is a free WordPress plugin created by the same author as Contact Form 7.

The screenshot shows a web browser window with multiple tabs open at the top. The active tab is for 'import.wp-migration.com'. The page content is for 'All-in-One WP Migration Import'. It features two main pricing plans: 'Basic' and 'Premium'. The 'Basic' plan is described as 'For sites < 512MB' and includes a 'Safe download analyzed by MetaDefender' badge. It has a 'Download' button and a link to 'Install Instructions'. The 'Premium' plan is described as 'For large sites' and has a 'Get Started' button. Below the plans, there's a 'Pricing' section comparing 'Product cost' (Free vs \$69/lifetime) and a 'Features' section comparing 'Backup size' (up to 512MB vs Unlimited). A note at the bottom right says '(Unlimited) Activate Windows' and 'Go to Settings to activate Windows'. The browser taskbar at the bottom shows several pinned icons.
